

## **Nondamaging Enhancements - *Prescription Nails***

*Prescription Nails* is a non-damaging nail enhancement method that replaces acrylics and gels. *Prescription Nails* is a technological breakthrough in the nail care industry. They are called "Prescription" Nails because each set is carefully prescribed - the curvature and arch of each nail is precisely measured and recorded on a client's personal prescription card. The nails are custom fitted to the client's nail shape and size - producing nail enhancements that have a very natural look and feel.

- No fill-ins needed
- No painful removal
- Non-damaging sanding & buffing
- No damaging electric drills used
- Each set lasts for up to 2 weeks
- Thin, durable, natural look and feel
- Great for nail biters and those concerned about protecting the natural nail bed
- Clear, full-cover nails, custom-designed for application on top of the natural nail bed
- Perfect for clients who want long, beautiful nails without the damage associated with traditional acrylic, gel, or wrap enhancement methods

Are you fed up with salons that employ nail techs that never listen to your requests and continue to give poor customer service? Are you fed up with having your nail beds and cuticles painfully burned with the improper use of the electric drill? Are you fed up with painful prying enhancement removal that takes off layers of the natural nail plate and permanently damages the nail matrix? If you answered yes to any or all of these questions then you can avoid these problems by changing to *Prescription Nails* enhancements.

These wonderful enhancements are clear, full-cover nail extensions that are custom-designed for application on top of the entire natural nail bed. They are durable and last up to two weeks. They are easily soaked off in about 15 minutes in acetone when professionally removed at the salon. You can have a new full set of nails every two weeks without suffering painful prying or drilling.

*Prescription Nails* also help grow your natural nails. They provide a protective cover over the entire nail bed - preventing breakage as the natural nails grow. When you get your FREE soak-off removal every two weeks, your nails are examined to make sure that your nail beds are staying healthy.

The length of your natural nails doesn't matter. You might be a nail biter with no length at all. You might have short or medium length natural nails. *Prescription Nails* are clear, you can see the length of the natural nail through the tips, so the natural nails are usually shortened for best results.

*Prescription Nails* are lightweight so they are comfortable to wear. Many women have told me that their friends thought that the *Prescription Nails* were natural nails. If you want a healthier enhancement method that produces beautiful nails that look and feel just like your own then you need *Prescription Nails*.

**NOTICE: Please Be Advised - *Prescription Nails* Enhancements will **not** be applied on nails with fungus infections.**
